Codessec

WEBSITES · SYSTEMS · SECURITY

One team for your whole IT setup

Codessec is an IT solutions and cybersecurity company. We give individuals and businesses a single trusted partner for everything technical: the website customers see, the systems behind it and the security that protects both.

Instead of chasing a web developer, a network technician and a security tester separately, you work with one team that understands how the pieces fit together and stays reachable after the job is finished.

Web development | Penetration testing | Linux & Windows servers | Hardware & software | Technical support

What we offer

Seven services that cover your website, your machines and your security.

Website development

Fast, mobile-friendly websites and web systems that represent your business and bring in customers.

- Business and portfolio sites
- Online forms and booking
- Custom web systems

Website pentesting

Authorised security testing that finds weak points in your site and gives you a clear list of fixes.

- Vulnerability assessment
- Written risk-ranked report
- Fix support and re-test

Server maintenance

Updates, monitoring, backups and hardening so your servers stay available and protected.

- Patching and updates
- Backup set-up
- Security hardening

Computer maintenance

Repairs, clean-ups and upgrades that keep office and home computers running smoothly.

- Virus and malware removal
- Slow-PC tune-ups
- Hardware upgrades

Software installations

Installation and set-up of operating systems and business software, configured properly the first time.

- Windows and Linux set-up
- Office and business tools
- Antivirus and security tools

Windows bypass

Access recovery for locked Windows computers you own, such as forgotten passwords and lost logins. Ownership is confirmed first.

- Forgotten password recovery
- Locked account access
- Data kept safe

User support

Friendly help for you and your team whenever something stops working.

- Phone and WhatsApp help
- Staff guidance
- Troubleshooting

Find the gaps before attackers do

A website pentest shows you how your site would hold up against a real attack. You get a plain-language report and help fixing every issue it finds. All testing is done

only with your written permission.

Book a security test

Scope

We agree what is tested and get your written permission.

Test

We probe your site and server the way an attacker would.

Report

You receive findings ranked by risk, each with a fix.

Secure

We help apply the fixes, then re-test to confirm they work.

How we work together

The same simple path for every project, big or small.

1

Tell us what you need

Call, message on WhatsApp or use the form below.

2

Get a plan and quote

You receive a clear scope, timeline and price before any work starts.

3

We do the work

You get regular updates until the job is complete.

4

Handover and support

We walk you through the result and stay available for help.

Who we help

Small businesses

Websites and IT that grow with you.

Shops and offices

Reliable computers and fewer interruptions.

Schools and institutions

Managed systems and user support.

Startups

A secure web presence from day one.

Individuals

Repairs, set-up and account recovery.

Your digital solutions partner

One point of contact Build, secure and support with the same team.	**Security first** Every site and system is set up with protection in mind.
Plain language Clear explanations, no jargon, no surprises.	**Ongoing support** Help is a call away after the job is done.
